## DETAILED ACTION

### *Response to Amendment*

1. The reply filed 05/10/2004 was applied to the following effect: All relevant objections and rejections are withdrawn as being satisfied.

### *Priority*

2. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 02/16/2001. It is noted, however, that applicant has not filed a certified copy of the JP 2001-040589 application as required by 35 U.S.C. 119(b).

### *Reasons for Allowance*

3. Claims 1-14 and 16 are allowed (renumbered as 1-15, respectively).

The following is an examiner's statement of reasons for allowance:

This application is for a NEAR-FIELD INFORMATION  
RECORDING/REPRODUCING APPARATUS HAVING WAVEGUIDE WITH  
REFLECTION SURFACE.

- **Claim 1** specifies an information recording/reproducing apparatus utilizing near-field light, which requires:

*"a reflection surface comprised of a terminal end of the clad located beyond a terminal end of the core of the optical waveguide opposite the light source for irradiating light projected from the terminal end of the core to the near-field optical head; and wherein the terminal end of the core is located at an intermediate part of the optical waveguide so that the clad extends beyond the terminal end of the core and terminates at the reflection surface."*

The Examiner interprets the reflection surface of the claimed invention to be an integral part of the clad (i.e., a single unit). Davis et al. (hereinafter Davis '094) (US 6,058,094) show a

Art Unit: 2653

reflection surface 445, which is not comprised of terminal end face of the clad of the optical fiber 102, but rather as a separate entity. Furthermore, the core of the optical fiber 102 does not terminate at an intermediate part of the optical fiber 102. Davis '094 does not teach or suggest that the core of the optical waveguide terminates at an intermediate portion of the clad, the clad extends beyond the core, and the reflection surface is comprised of a terminal end of the clad as claimed in the present invention.

Therefore, these features, in combination with other features of claim 1, are not anticipated by, nor made obvious over, the closest prior art of record of Davis '094.

- **Claim 10** specifies a near-field optical head, which requires:

*“a reflective surface comprised of an end face of the clad, the core having an end face facing the reflective surface and terminating at an intermediate portion of the optical waveguide so that it is spaced apart from the reflective surface so that light traveling through the optical waveguide is projected from the end face of the core, diverged by the clad and irradiated onto the reflective surface and is reflected by the reflective surface toward the minute structure;”*

The Examiner interprets the reflection surface of the claimed invention to be an integral part of the clad (i.e., a single unit). Davis et al. (hereinafter Davis '094) (US 6,058,094) show a reflection surface 445, which is not comprised of the end face of the optical fiber clad, but rather as a separate entity. Furthermore, the core of the optical fiber 102 does not terminate at an intermediate part of the optical fiber 102. Davis '094 does not teach or suggest that the core of the optical waveguide terminates at an intermediate portion of the clad, the clad extends beyond the core, and the reflection surface is comprised of a end face of the clad as claimed in the present invention.

Art Unit: 2653

Therefore, these features, in combination with other features of claim 10, are not anticipated by, nor made obvious over, the closest prior art of record of Davis '094.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
